

### **A-Project:**

#### **AGROPOLE SENEGAL**

##### **Exporter: Agricoltiva Swiss AG, Frauenfeld**

Turn-key project that includes: planning, construction of Agro Industrial Centre (AIC), training centres, nomad area and facilities and private farms.

The project developed by Agricoltiva, Mitrelli Group's agriculture subsidiary, is located across three municipalities, Malicounda, Nguéniène and Sandiara, 85 kilometers southeast of the capital Dakar. The Agropole aims to significantly increase food production and agricultural employment and provide agro-industrial logistics, support services and post-harvesting for all local agricultural activities.

The final project will cover 1,160 Ha and will be equipped with advanced technologies. The Agropole West will include three agricultural development and training centers with open fields crops, different types of farm activities (egg, dairy, sheep) and logistics centers. In addition, the Agropole will have private farming areas and an allocated zone for nomad cattle herdsmen including veterinary health and vaccination facilities and feed supply.

The Agropole will have a significant economic and social long-term impact on farming in the area and the wellbeing of the residents, creating 3,000 direct jobs and 8,000 indirect jobs, increasing the local area's self-sufficiency and Senegal's national food security. It will provide education and modern agricultural training for the farming communities (for example the use of brackish saline water and modern sheep production) empowering communities through knowledge transfer.
